SCHLAGE KEYPAD DEADBOLTS

Features and Benefits

- Innovative Turn Lock feature allows you to lock & leave without a key
- Provides the convenience of keyless access; customizable to fit your security needs
- Ideal for front doors, side & back doors, garage entry doors, etc.
- Easily replace most existing deadbolts with a screwdriver in about 30 minutes
- No programming required; preset with two user codes so it's ready to use right out of the box

1500 POCKET DOOR FRAMES-K.D.

SELF ADJUSTING FLOOR ANCHORS

Long vertical fingers slide into split studs - allowing for floor settling without disturbing horizontal alignment of header and track. Anchors can be nailed, screwed or cemented to floor.

STEEL WRAPPED UPRIGHT STUDS

Split jamb and studs uprights have full zinc plated steel sides and backs to give maximum rigidity for wall material and to restrict accidental nail penetration. Slots on split stud edges allow easy nailing of jamb stock.

REMOVABLE TRACK

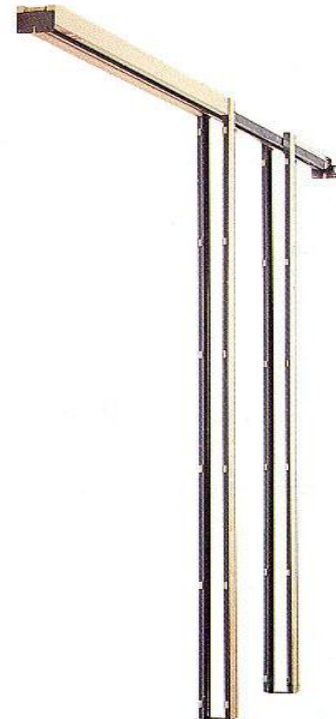

Track has keyhole attaching point slots allowing easy removal without tearing out walls. Box design prevents rollers from jumping track. Heavy walled aluminum track is precision extruded for smooth operation. Convex rail track design provides single point hanger wheel contact for low roll resistance and dust traps on both sides of rails allow hangers to operate freely when dust builds up.

TRICYCLE HANGERS

Unique three wheel design ensures all wheels carry door weight equally. Smooth rolling balanced wheels offer minimum friction riding on convex track rails. "Flip-of-a-clip" separates wheels from hanger plate for easy door installation/removal. Standard **1120 hangers** are tested for doors weighing up to 125 lbs. [57 kg.] and **1125 heavy-duty ball bearing hangers** are tested for doors weighing up to 200 lbs. [91 kg.] each.

TESTED QUALITY

Johnson pocket door frames are the only pocket door frames INDEPENDENTLY tested to ANSI standards.

2710 PRE-FABRICATED POCKET DOOR FRAMES

Designed for use in standard 4-9/16" (115 mm) thick walls sheeted with drywall. Removable aluminum track with convex rails, rust resistant steel reinforced frame stiffener, jump proof three wheel hangers and self adjusting floor anchors. Plaster ground on frame accepts up to 1/2" (12mm) plaster board material or can be trimmed for 1/4" (6.3mm) paneling material. Horizontal members provide solid support for wall materials, and the center member is located at 48" (121.9cm) center for horizontal plaster board installations. Standard track and tricycle hangers are 111 Series, but for heavier doors, the 100 Series track and 1125 hanger combination is available for door up to 200lbs. (91kg.). An adjustable steel bracket on the header fastens directly to the rough stud at the opening side. This allows the finished jamb to be installed after rough construction is completed, preventing damage to finished materials.
